

The ARXX[®] ICF Advantage

For over 15 years, ARXX has been providing U.S. and Canadian homeowners with comfortable, healthy, and energy-efficient homes. With over 150 million square feet of high performance wall systems already constructed in homes, hospitals, hotels, churches, fire stations, schools, and many other types of structures, ARXX is the proven ICF chosen by building professionals throughout North America.

Enjoy greater comfort and security year round¹

When planning a new home, consider the benefits of building with ARXX ICFs that are proven to provide greater stability of indoor air temperatures, and superior protection from air infiltration and noise. Additionally, ARXX homes are proven to be stronger than conventional built homes and are constructed to better protect you and your family from the harshness of the outdoors.

8 times greater thermal mass than wood¹

With its high R-values, low air infiltration and high thermal mass, building with ARXX ICFs can dramatically reduce monthly heating and cooling costs compared to conventional built homes. Plus, building with ARXX forms can reduce your initial building costs by installing a smaller HVAC system.

ARXX forms have been used to help homes earn the ENERGY STAR[®] rating. To view an actual report of an ENERGY STAR Qualified Home built using ARXX products, please go to our website and click on the “Home Owners” link.

2 to 4 hour fire resistance ratings¹

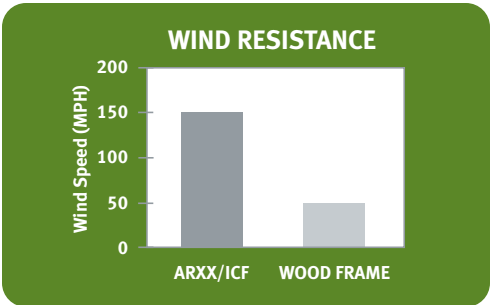

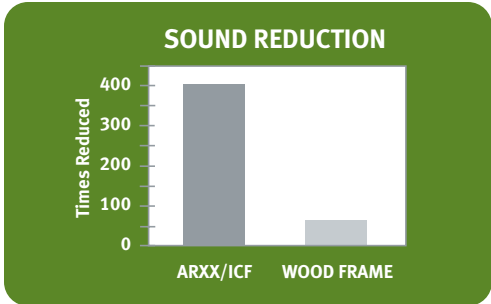

ARXX has completed extensive testing by Underwriters Laboratories (UL 263 and CAN ULC-S101) to achieve 2 hour and 4 hour fire resistance ratings depending on the size of ARXX form(s) you choose.

4 times quieter than wood¹

"When you build with ARXX you get peace and quiet AND peace of mind! Once you live in an ARXX home you too will share our passion."

*– Ron & Bev,
ARXX Homeowners*

3 times the strength of wood¹

ARXX walls can be designed to withstand wind speeds of up to 150 MPH or more!

"When Hurricane Charley passed right over our home – I felt totally safe – you could not even hear the 150 mph winds outside. I wanted to build the best home I could. And I did!" – Chuck Taylor, ARXX Homeowner
